DOB - 24 December 2007

I am a hard-working and dedicated individual who sticks to deadlines and works well both in groups, and independently. I am looking to earn some money and gain work experience. I am happy to try anything and can adapt to whatever is required.

Education

Yavneh College, Borehamwood, Herts

I am in the first year of Sixth Form, studying 4 A-Levels: Maths, Further Maths, Physics and Computing, and all of my target grades and working grades are at A*s and As. My projected grades are:

Results:

Subject	Level	Grade
Maths	GCSE	9
Computer Science	GCSE	9
Physics	GCSE	9
Chemistry	GCSE	9
Geography	GCSE	8

Subject	Level	Grade
Biology	GCSE	8
Design and Technology	GCSE	8
English Literature	GCSE	8
Religious Studies	GCSE	8
English Language	GCSE	7
Further Mathematics	OCR/AS	A

Work experience

National Physical Laboratory(NPL) – June 30th 25 – July 4th 2025

I took NPL's work experience week in the beginning of July as one of under 100 successful applicants from a pool of many thousands. Over the week I spent time working on a project called PUAP, nicknamed Skipper, which was a rubbish segregation and collection system to clean the streets. My team and I spent the week designing, and handling logistics to make the project a possible reality. Since this work experience I have spent much time working on the project's design towards building and programming the robot we designed so that it can be a reality.

DeHavilland Aircraft Museum – July 14th 2025 – July 19th 2025

As a second week of work experience in the end of my first year at 6th form, I took a week at the DeHavilland aircraft museum, working as an archivist and steward. I spent the week working with the volunteers at the museum, learning all I could about the history of the DeHavilland area from WWII and conveying this knowledge to as many people as possible who came to the museum.

Mechanics Work – August 16th – Present

Recently I began research into an abandoned business building in my home town with 3 cars left to rot, and after 8 months of consistent phone calls and research, I not only found the owner of the cars and building, but have now been given permission to work on the cars and fix them up to a working order. The likes of a Mercedes from 1999 and a Jaguar from 2006. Before this I would have never thought I had the ability to be this persistent and well communicated with networking to enable me to work on them.

Aveea STEM Workshop Assistant – Pinner Park Primary School, January 2025 – Present

At Aveea I go to Pinner Park primary school in Harrow to teach stem in a fun and interactive way. A few examples are that I made model volcanos with them and oversaw the whole activity making sure that there were no dangers and that everyone was getting a fair turn. Another example was when we ran a session to cut out stickers using a sticker machine, and I aided them in both the computer software and the printing of the stickers.

Private Maths Tutor – January 2025 – Present

I currently tutor a girl in year 10 maths, as she is coming up to her GCSEs and she has dyscalculia which I am now helping her tackle. We are making great progress and she is taking great effort in our sessions despite her not enjoying maths that much. I'm aiming to get her to be passing by the end of this academic year so that in year 11 she has less to worry about.

School Helper - Yavneh Primary School, September 2024 – January 2025

I assist the teacher in supervising the primary school children and help some of the students with reading practice.

After School Help/Babysitter, 2022 to present

Collect children from school (including one with special needs) and entertain them until parents return. Prepared food from instructions to ensure strict dietary requirements.

Skills

Adaptability – I have the exceptional skill to adapt to any scenario, allowing me to get and give the best output in work. Along with this I have the ability to learn extremely fast and will then acclimatize to whatever role I have.

Communication – with my experience of tutoring and working in the primary school, I have become adept at explaining ideas at different levels.

Problem Solving – I love a challenge! I enjoy developing unique and interesting approaches to problems, which can lead to some very efficient results.

Hobbies and Interests

Cooking and baking – On the regular, I will end up cooking and baking for my family as my culinary skills are up to scratch. I cook pizzas frequently from scratch to people's extreme satisfaction, leading to some people only liking pizza if done by me. I bake too, making a variety of goods such as doughnuts, cinnamon rolls, croissants, etc.

Computer programming / Game development – I have published several games to multiple platforms and have self-taught how to 3D model to a high degree of accuracy, for both digital and physical applications such as 3D printing.

Creative writing – written over 50 poems, 5 short stories, and I am currently working on two novels.

Self-taught abilities – Currently, I am teaching myself the guitar, French, the Korean Alphabet, how to 3d Model and more. I can also easily adapt to learning new skills for a certain role.
